# SangeetPitara

OFFICIAL USER MANUAL

**Synchronized Audio Room Guide**
Version 1.1.24 · Desktop & Mobile

## 1 How to Create a Room (Desktop & Mobile)

Start a new listening session as the Host in just two clicks. No registration or account required.

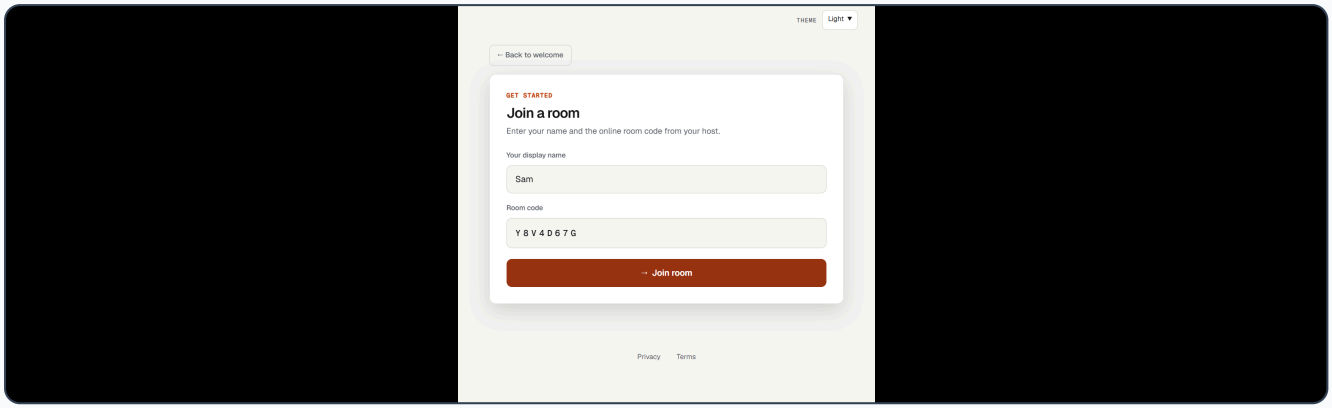

**1. Enter Your Display Name**
Type your name (e.g., "Sam") in the first field so other listeners know who is hosting.

**2. Enter a Room Name**
Name the session (e.g., "Music Lounge" or "Study Beats").

**3. Click "+ Create private room"**
Your private room is generated instantly with an 8-character code and you enter the room as Host.

## 2 How to Join a Room (Desktop & Mobile)

Connect to a live listening room using an 8-character code or direct invite link.

**1. Enter the 8-Character Room Code**

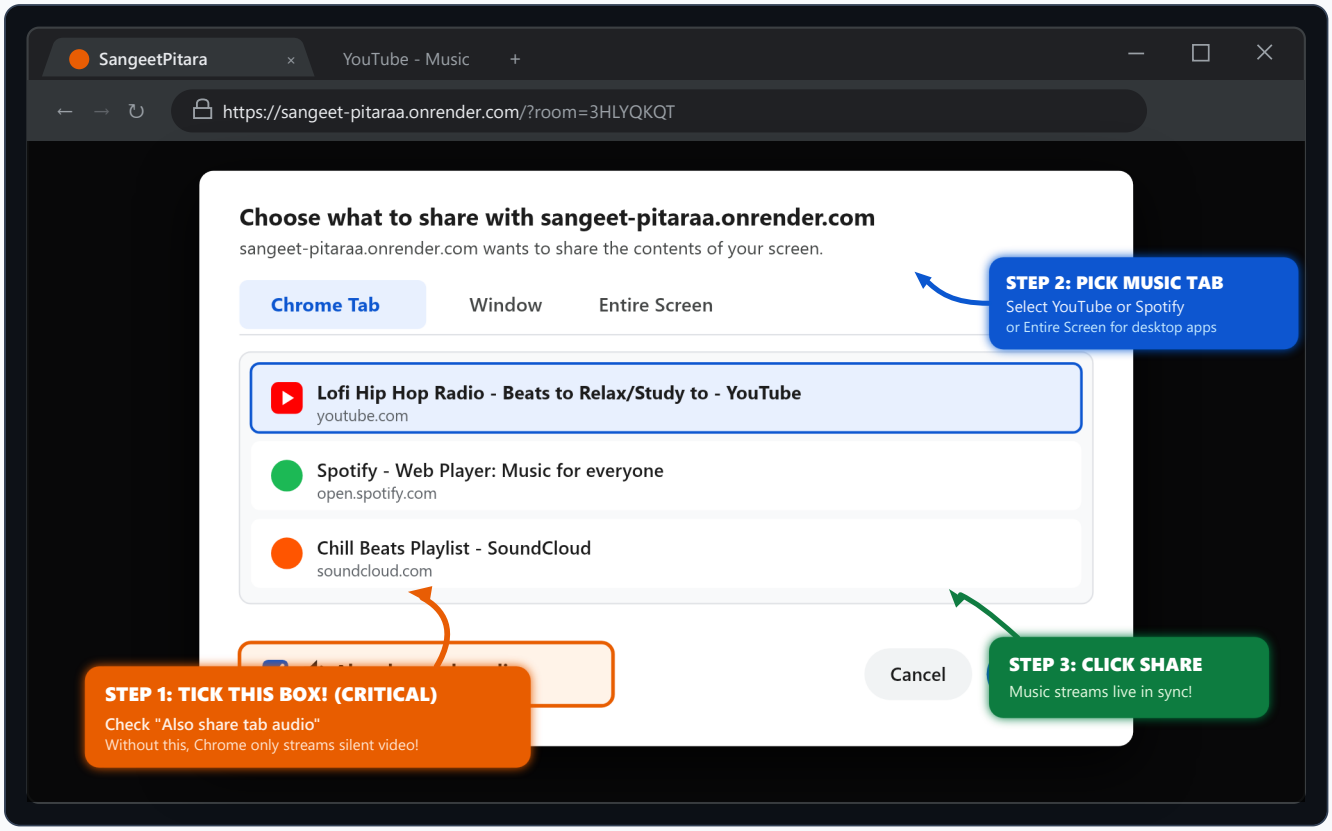

Paste the code (e.g. `3HLYQKQT`) sent by your friend. Spaces and hyphens are automatically cleaned.

**2. Enter Your Display Name & Click "Enter room"**

Type your nickname and click **Enter room** to immediately sync into the live audio stream.

## 3A How to Share Audio — Desktop Browser (Windows Chrome / Edge)

When sharing sound from YouTube, Spotify Web, SoundCloud, or desktop apps on a Windows PC:

⚠️ **STEP 1: TICK "Also share tab audio" (MANDATORY)**

**CRITICAL:** In the bottom-left corner of the Chrome dialog, you **must check** the box for "*Also share tab audio*" (or "*Share system audio*"). If unchecked, Chrome only streams silent video without sound!

**STEP 2: Select the Music Tab or Screen**

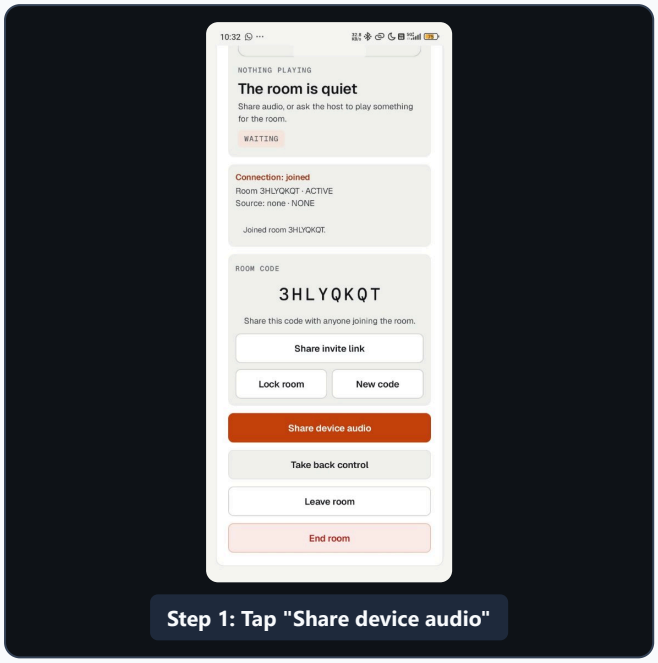

Under **Chrome Tab**, pick YouTube or Spotify. Or switch to **Entire Screen** if playing from a desktop player.

**STEP 3: Click "Share"**

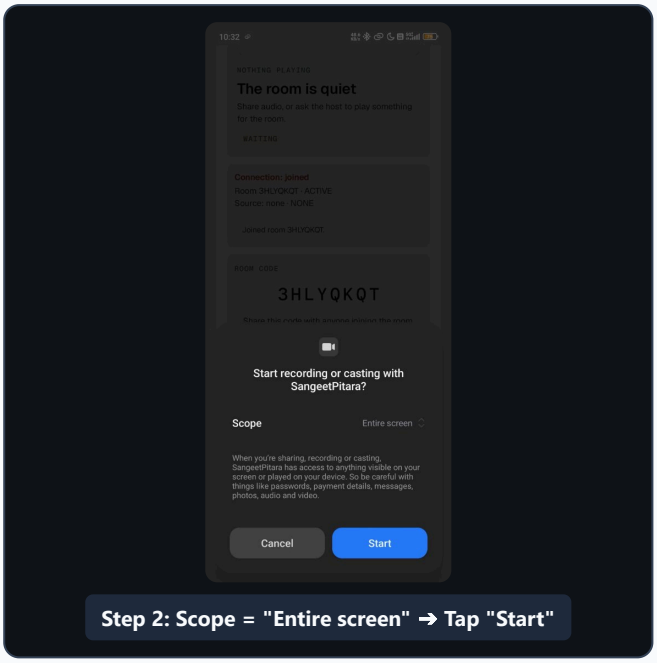

Click the blue **Share** button. The cassette reels spin and high-fidelity sound streams live to everyone.

## 3B How to Share Audio — Mobile Phone (Android App)

Mobile web browsers cannot capture background audio from other apps. To stream phone audio, use the **SangeetPitara Android App**:

Step 1: Tap "Share device audio"

Step 2: Scope = "Entire screen" ➔ Tap "Start"

**1. Tap the Orange "Share device audio" Button**

Inside your room in the Android app, tap **Share device audio**.

**⚠️ 2. Set Scope to "Entire screen" (CRITICAL)**

When Android asks "*Start recording or casting with SangeetPitara?*", tap the **Scope** selector and choose **Entire screen** (not a single app) so background music is captured!

**3. Tap the Blue "Start" Button & Switch to Your Music App**

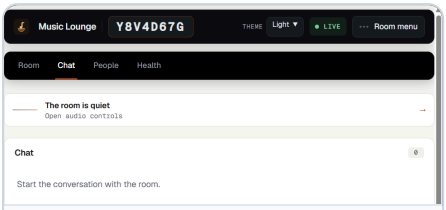

Tap **Start**. Now open Spotify, YouTube Music, or any media app. Everyone in the room hears your music in sync!

**💡 In a Phone Browser without the App?**

Tap **"Share audio file"** in your phone browser to stream local MP3/WAV/FLAC files from phone storage without needing any app!

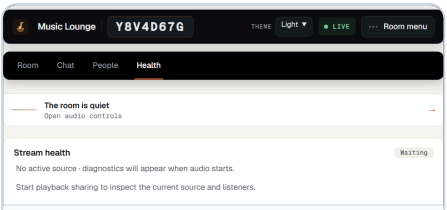

## 4 Essential Room Features (Chat, Health, Themes)

Everyday tools available in one click inside every room:

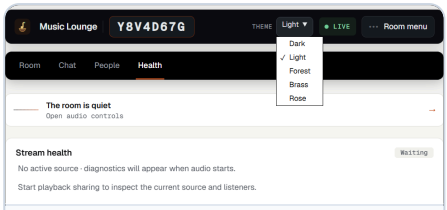

### Chat & Voice Notes

- **Reactions:** Tap ❤️, 🔥, 👏, 🎧 for floating emojis.
- **Voice Notes:** Hold the microphone button to send high-fidelity voice notes.

### Health Diagnostics

- **LIVE Pill:** Real-time connection status.
- **Stream Health:** Jitter buffer and packet loss metrics.
- **Export:** Download telemetry debug log.

### 5 Studio Themes

- **5 Themes:** Dark, Light, Forest, Brass, Rose.
- **Topbar Picker:** Instant switch.
- **Black Header Tabs:** High contrast on all themes.
